

## SNOW GLOBE KIT INSTRUCTIONS FOR SMOOTHING OUT VINYL

To remove any wrinkles from vinyl, please use the following steps.

1. Heat dry iron to low temperature - silk/wool setting
2. Place each sheet of vinyl separately between two pieces of copy paper
3. Cover paper with a pressing cloth
4. Very quickly pass the iron over the press cloth once only
5. Allow to cool a bit and then check to see if the vinyl is nice and flat.
6. If there are still wrinkles repeat step 4 until all wrinkles are removed

The vinyl will soften with pressing - allow to cool before moving or it may stick to itself
